SCHOOL OF
PUBLIC HEALTH
Office of Career Services

At the IU School of Public Health-Bloomington, we prepare students for challenging careers that promote wellness and the prevention of disease in communities everywhere.

WE BELIEVE IN:

- Health and quality of life as a human right
- Diversity and the value of a global perspective
- A multidisciplinary approach to learning and research
- Helping others through community engagement
- The educational value of career and internship experiences

The School of Public Health-Bloomington offers a variety of subject areas for undergraduate, master's and doctoral degrees – as well as certificate programs and minors.

SPH STUDENTS

For employers looking to recruit IU School of Public Health-Bloomington students, we are available to assist in a variety of ways to ensure you are meeting with the students who best match your job and internship openings.

Assist with recruiting – Our team works one-on-one with employers to understand their needs and ideal qualities in candidates for jobs and internships, and then helps to match employers with students in our school. We offer a variety of recruiting opportunities and work with employers to customize services.

Interviews – Employers are invited to set up interviews on-campus or virtually throughout the academic year. We work with employers to make dedicated space available for interviews and work to ensure you are able to meet and connect with the students you see as candidates for your open positions.

Career fairs – We host a fall and spring career fair each academic year and invite employers cutting across public health industries to participate in one or both of these opportunities. Our fairs draw students from all majors eager to discuss internship and full-time job opportunities. On occasion, we host events based on specific industries. Career fairs may also be held virtually offering both one-on-one and group interactions from a distance.

Other events – We are always looking for employers willing to interact with students and be part of panel discussions, networking events, employer office hours, and information sessions with our students. This is a great way for both students and employers to network, and allows students to learn more about a company, job, and field. Opportunities are also available in virtual formats.

Job/internship postings – Handshake is our free job and internship posting site available to all IU students. Employers may advertise approved job or internship postings here at no cost, and can determine the deadline and application method for each posting.

Partnership opportunities – We offer several ways employers can stand out among the crowd and partner with our office on events. We offer partnership opportunities for career fairs, career programs and workshops, and networking trips. In addition, our Employer Spotlight is a featured blog article written by the employer that gives an overview of the organization, showcases any alumni working there, and outlines any positions available.

DIVERSITY AND INCLUSION

A life in public health means working with people of all different backgrounds. We celebrate and seek diversity in all its forms because we know there is so much we can learn from each other. Everything about our academic mission is made better by the exchange of ideas and diverse experiences of our students, faculty, and staff.

CAREER READINESS

The Office of Career Services at the IU School of Public Health-Bloomington is focused on ensuring our students and graduates are ready for a career in public health. As defined by the National Association of Colleges and Employers, “career readiness is the attainment and demonstration of requisite competencies that broadly prepare college graduates for a successful transition into the workplace.”

To help our students achieve these competencies and be career ready, we have developed four Career Communities. A Career Community consists of a group of students who have career interests that fall into a specific occupational category.

This model was implemented to provide a more targeted approach to guiding students through the career development process, and help employers match with students specifically interested in their field and organization.

CAREER COMMUNITIES

COMMUNITY HEALTH & HUMAN SERVICES

Students feel passionately about bettering the lives of children, families, and communities, and are ready to make an impact in a big way. Detail-oriented problem solvers with a human touch thrive in these fields—our students are prepared to assess needs and figure out which policy, programming, or education strategies might best address them. By focusing on effective communication, and understanding relationships and human development across the lifespan, our students are ready to deliver services that can lead to a safer, healthier world.

HEALTH & LIFE SCIENCES

Students are prepared to address how environmental hazards affect human health or even help to prevent or slow the spread of the next pandemic. The strengths of our students in this Career Community include being big-picture thinkers with a general love of math and science and a knack for spotting patterns. They are eager and motivated to discover new treatment options for a disease or develop innovative practices

HEALTHCARE & WELLNESS

Our students in this career community are primed to be part of the medical and allied health professions and a great fit for working directly with people to help them live the healthiest possible lives. They like to help others make science-driven choices about exercise and nutrition, or rehabilitate from disease or injury. They bring a strong background in anatomy, physiology, biology, chemistry, and physics.

SPORTS, EVENTS, TOURISM, & LEISURE

Students in this career community believe that sports and leisure activities are essential to a healthy life, and are primed to transform their passion into an exciting career. Collegiate, professional, and recreational athletics, along with hospitality, are booming industries that require people who have expertise in marketing, sales, management, media, operations, and legal matters. The communication, problem-solving and teamwork skills developed in our students will provide you with business with immediate impact.
