CORPORATE PROJECTS
GENB 3302: Connecting Bauer To Business

What Are Corporate Projects?

Corporate projects are group research projects in the GENB 3302: Connecting Bauer to Business course. Teams are composed of eight students, usually sophomore level, who often have never worked on a group project before. The project requires the team to research a problem or question and present findings and recommendations, usually as a PowerPoint presentation, with an accompanying executive summary. All projects contain a basic research component as well as a basic presentation component. Because these students have not yet taken upper-level electives, projects typically should not include the types of problems that seniors would address. The program has received the National Association of Colleges and Employers (NACE) Professional Change Maker Award in 2012 for its innovative approach to experiential education in early college education.

PROJECT EXAMPLES

1

Benchmarking
Social Media,
Internship or
Benefits Programs

2

Improving
On-boarding

3

Workplace
Environmental
Programs

4

Recruiting
Strategies

5

Employer Branding
on Campus

6

Designing Apps,
Branding Videos
or Events

What Is the Time Commitment?

While there is no charge to participate in the program, it does require some time and attention. Project sponsors must develop a project proposal at least one month prior to the start of classes. Students will generally contact sponsors approximately one month after classes begin and work for six or seven weeks on the project before giving a final presentation. We recommend you have weekly e-mail or phone progress updates, and encourage you to review and give feedback on a draft or outline of the presentation prior to the students' final presentation. You will also coordinate with the team to schedule a final presentation, either on campus or in your offices, and complete a one-page grading rubric. While this does not require a large time commitment, we've found that the more you communicate with your team, the better your final deliverable will be.

What Makes a Good Project?

The problem, desired outcome and deliverables should be clearly defined, and the students should know if there are specific resources they should or should not use. The students are particularly good at surveys and benchmarking.

Bear in mind that students cannot be asked to do the actual work of your organization as part of this program. Because this is an unpaid academic project and not an internship, their work must remain focused on research and presentation. There is slightly more flexibility, however, on implementing programming for non-profit entities.

Why Participate?

This is a great way to spread your brand on campus and get truly involved in classroom learning. You have the opportunity to mentor, develop and shape the next generation of business leaders by being part of their educational process. This is also a great way to get the perspective and insight of current college students on your company and industry. The students who participate in a corporate project are choosing to do these projects, even though they require more work than alternative options in the class, because they want to have the learning experience. These are precisely the types of students you want to know! While you are not expected to hire any students on your project, we've found many project sponsors successfully recruit from project teams.
